

Pennsylvania Energy Code Collaborative Roadmap for 100% Compliance by 2020

 The Pennsylvania Energy Code Collaborative is a diverse group of stakeholders working together to reduce energy usage in buildings by improving compliance with the state's building energy code.

Our goals are to:

- ❖ Assist the state to **measure and achieve full compliance** with its 2009 energy codes;
- ❖ Educate consumers to **build demand for efficient buildings** and strong energy codes; and
- ❖ Create an ongoing **forum for collaborative discussion** of energy code compliance and enforcement issues.

To meet these goals, we have identified the following long-term strategies:

- (1) Create and maintain a best-in-class energy code training website;
- (2) Increase education to consumer-facing audiences;
- (3) Expand the reach of compliance tools;
- (4) Pilot code compliance approaches; and
- (5) Educate policymakers and provide technical input into legislative & administrative activities.

Using these strategies, we propose the following Collaborative roadmap to increased code compliance:
